

JOIN the NATIFLife Network and enjoy your ADVANTAGES!

www.natiflife-project.eu

Novel services will be available for entities belonging to the NATIFLife Network:

NETWORKING

- Increasing Visibility, exchange of Best Practice among Stakeholders, Demand/Offer of Needs/Technology.
- Developing Joint Research on innovative Assistive Technology, also through the participation to research projects.

TRAINING AND HANDS ON SESSIONS ON ASSISTIVE TECHNOLOGY

- Attending training and Hands On Sessions on Assistive Technology and User Centered Design.

SHARING R&D LABS FACILITIES

- Sharing facilities and equipments to develop joint activities of industrial interest: Rapid Prototyping of wearable and flexible sensors, Embedded Smart Sensing Systems, Robotic platforms.

EXPLOITING LIVING LABS

- Assessment of Assistive Technologies by the pro-active involvement of End-Users.

The NATIFLife Project

The NATIFLife project aims at developing an innovative framework of Assistive Technology to provide autonomy to elderly, thus enabling de-hospitalization, staying in places of origin and avoiding to break the bonds with families. The strategic cross-border Italy-Malta cooperation will tackle the challenge of Active Ageing exploiting the contamination between stakeholders with complementary skills: enterprise, research centres, institutions, end-users. The development of high technological assistive solutions will a redesign a new concept of private and public services.

The NATIFLife Concept

Project Objectives:

- Strengthening of Research Centers
- Communication and Networking
- Integrated Platform of Assistive Technologies
- Realization of two Pilot Demo Sites

The NATIFLife Objectives

Strengthening of Research Centers

The two equipped Research Centers, in Catania and Malta, allow to perform disruptive research in the field of Assistive Technologies and to create a reference for stakeholders.

Communication and Networking

The NATIFLife Network enables Contamination at the Cross-Border Level between Stakeholders in Assistive Technology (Association, Private/ Public Sector, R&D), to increase Visibility, exchange Best Practice, facilitate Needs/Technology-Demand/ Offer.

Integrated Platform of Assistive Technologies

The Integrated Platform of Assistive Technology, compliant with traditional and innovative solutions, allows to improve the life quality of elderly and people with minor impairments.

Two Pilot Demo Sites

The two Living Labs, in Catania and Malta, allow for assessing innovative Assistive Technologies, by the pro-active involvement of End-Users.
